

DINO – Up to the Job

Dinolift Oy, the Finnish manufacturer of DINO lightweight aerial work platforms, is showing a variety of lifts from its current range, as well as something new, at bauma 2019. “The DINO lightweight family grows with a new member in order to better meet the demand on the market” says Veli-Matti Savo, Commercial Director of Dinolift. More information about the novelty will follow nearer to the show.

DINO RXT series – Higher. Lighter. Smarter.

The DINO RXT series – a lightweight 4x4 wheeled boom lift with outriggers – is a proven concept and the latest model DINO 280RXT takes the series to a new level regarding boom performance and overall usability while maintaining the original idea of low overall weight.

Thanks to the light weight DINO RXT is a perfect choice whenever there are weight restrictions in the work site or outstanding off-road and levelling capability on a difficult ground are required. The powerful Kubota engine combined with the low overall weight and low center of gravity of the machine allows to move easily even if ground conditions are challenging. Moreover the low weight means not getting stuck in mud or damaging gentle surfaces whether it is outside on grass or inside on gentle floors.

The DINO RXT has a next-generation boom which gives the operator superior outreach with a heavier basket load. Another advantage is the high-rising articulating arm together with the 140° range of motion 1.6m long jib boom. Faster drive speed and the outriggers add to the efficiency of working.

DINO 230VT – Driving to work. Made easier.

The DINO 230VT is an outstanding addition to the Dinolift’s wide range of lifts and a welcome newcomer to the vehicle-mounted lift market. The DINO 230VT is a straight telescopic boom lift with a working height of 23 metres. The lift is mounted on a 3.5 ton vehicle chassis and requires a B-class driver’s license.

The user-friendly DINO 230VT features intuitive controls, automatic levelling, an easy-entry basket with non-slip stairway, and three jacking options – everything you need for working at height safely and efficiently. It is equipped with a next-generation boom that uses durable yet lightweight ultra-high strength steel to optimise lift performance without increasing total weight. The telescope cylinder is located inside the boom, so it is effectively protected from dirt and damage. The boom’s new design and excellent strength-to-weight ratio provide a competitive working load and lifting capability.

The DINO 230VT is purpose-built for rental use, which means that it can be operated in varying conditions and temperatures. Extensive service documentation and excellent spare part availability also increase the lift’s long-term cost-effectiveness.

DINO 220XTC II – All-terrain excellence

From the current range, Dinolift is showcasing also the DINO 220XTC II crawler – the smart choice for extreme working conditions. Robust but still lightweight and compact, DINO 220XTC II features a gradeability of 43% combined with an outstanding levelling capability of 16°. Thanks to its long tracks it is extremely safe to drive and for easier maneuverability it can be equipped with an optional radio-control. For indoor operations the XTC II has a 240VAC electric motor for all movements as well as the optional

nonmarking tracks. In addition to 220XTC II shown is also the bespoke all aluminum DT3500L trailer for easy transporting of the DINO crawler.

DINO 160XTB II – Reach high. Travel light.

The popular trailer-mounted DINO 160XTB II with the working height of 16m will also be on display at bauma. The battery-powered, compact 160XTB II comes with all the DINO standard features, such as continuous rotation of the boom, 180⁰ hydraulic basket rotation, easy-entry gate on the aluminum basket and proportional controls for smooth operation. The machine is also equipped with automatic levelling, LED outrigger support indicator, cable steering for the driving and 2kW Honda generator for charging batteries where 230VAC is not available.

We welcome you to see the DINO range in the open air area on stand FS 1306/1!
